

6700 Series Pipe Lasers Pass the Test

<<Without a doubt, Laser Alignment pipe lasers are the most rugged I have ever used.>>

In October 2000, after falling 12 feet (3 meters) a Laser Alignment 6700 Series Pipe Laser washed down a 10 inch (25cm) sewer line under 175 psi pressure from a water main break. It traveled five miles through twisting pipe and manholes before it was retrieved at the end of the line. The contractor, Alpine Contractors, completed the job

with the same pipe laser. After the project was complete, the pipe laser was taken to Beltsville Supply in Beltsville, MD, where it was checked over and retuned with no damage reported. Dale Robertson, from Alpine Contractors, said: "Without a doubt, Laser Alignment pipe lasers are the most rugged I have ever used."
